Experience

Machine Learning Engineer ***SHG Technologies Pvt Ltd, Bangalore* (*June 2024 – Present)***

- Developed lightweight computer vision and NLP models for Android-based smart vision glasses.
- Built AI-powered features including object identification, scene description, OCR, currency recognition, walking assistance, and an offline voice assistant for visually impaired users.
- Built and optimized TensorFlow Lite pipelines for low-latency offline inference on Android edge devices.
- Managed the complete AI data lifecycle including dataset collection, preprocessing, annotation, metadata organization, augmentation, model training, evaluation, and deployment.
- Developed a standalone desktop application using Python and PyQt5 for image annotation and AI dataset validation, enabling non-technical users to prepare structured datasets for smart glasses feature testing.
- Built internal AI tools to automate dataset preparation, annotation, metadata organization, and validation workflows, improving dataset quality and reducing manual effort.
- Collaborated with Android developers and product teams to integrate, test, and deploy AI features into production applications.
- Leveraged Claude Code and AI-assisted development workflows for rapid prototyping, structured prompt engineering, debugging, and feature development.

Machine Learning Intern ***ArtifIntel Pvt Ltd, Chennai* (*Remote) (Nov 2020 – Dec 2020)***

- Worked on development of Predictive and Descriptive analytics for large numerical datasets.
- Used on ICMR health dataset to build supervised models for disease risk prediction, enabling early identification of vulnerable populations and supporting data driven health policy interventions.
- Analyzed the Global Youth Tobacco Survey (GYTS-4) dataset using classification and clustering techniques to identify high-risk demographic groups for tobacco consumption, providing actionable insights for preventive awareness campaigns.
- Applied time-series forecasting and anomaly detection on local crime datasets to predict crime hot-spots, contributing to potential resource allocation strategies for community safety and urban planning.
- Developed end-to-end ML pipelines from performing data cleaning, feature engineering, model training, evaluation, visualization across projects, ensuring reproducibility and producing insights with their measurable societal impact.

Projects

SnP Image Labeler | AI-Assisted Image Annotation Platform

- Designed, developed, and deployed a standalone desktop application using Python and PyQt5 for structured image annotation and OCR dataset preparation.
- Built configurable annotation and labeling workflows supporting structured metadata, OCR-assisted labeling, JSON/CSV exports, and dataset validation for AI model development.
- Integrated EasyOCR and PaddleOCR with multilingual support (English, Hindi, Arabic) for OCR-assisted annotation workflows.
- Applied structured prompt engineering, iterative validation, and AI-assisted development workflows to design, test, and refine application features while ensuring reliable production behavior.

- Packaged the application as a standalone Windows executable and deployed it for internal annotation teams, significantly reducing manual dataset preparation effort.

AutoBlogGPT | Multi-Agent RAG System using LangGraph

- Built a multi-agent Retrieval-Augmented Generation (RAG) workflow using LangGraph to retrieve and organize knowledge from unstructured Wikipedia content for knowledge-grounded blog generation.
- Designed specialized agents for content generation, evaluation, and markdown formatting to improve output quality.
- Implemented agent orchestration with conversation state management, iterative feedback, and memory for multi-step task execution.
- Implemented embedding-based retrieval using vector databases to improve context relevance and response quality.
- Designed evaluation workflows using representative prompts and automated feedback loops to measure response quality and continuously refine prompt performance.
- Designed prompt workflows for task decomposition, response refinement, and agent coordination.
- Deployed the application on HuggingFace Spaces using GitHub Actions-based CI/CD

AI Code Review System | Multi-Agent Developer Workflow using LangGraph

- Designed an agent orchestration workflow using LangGraph to automate code generation, review, documentation, and iterative refinement.
- Implemented specialized developer, reviewer, and documentation agents collaborating through structured feedback loops.
- Applied prompt engineering techniques to improve response quality, logical correctness, and code consistency.
- Implemented a human-in-the-loop style review workflow where reviewer feedback guided iterative improvements before final output.
- Integrated multiple AI agents into a coordinated workflow with response validation and task-specific automation using Python and LangGraph.

Education

- PGD in Artificial Intelligence & Machine Learning, (2023 - 2024), MIT World Peace University, Pune, CGPA: 9.15
- B.Tech in Computer Science Engineering, (2018 – 2022), MGMCET, Navi Mumbai, CGPA: 8.0

Technical Skills

- **Programming Languages:** Python, SQL, Java
- **Cloud:** AWS, GCP
- **ML/DL:** TensorFlow, PyTorch, Scikit-learn, HuggingFace Transformers
- **LLM Engineering, RAG & Agentic AI:** LangChain, LangGraph, OpenAI, Gemini, Claude, LLaMA, CrewAI, AutoGen, Retrieval-Augmented Generation (RAG), Prompt Engineering, Structured Outputs, Evaluation Loops
- **Computer Vision & NLP:** Computer Vision, NLP, OCR, Object Detection
- **Deployment & tools:** FastAPI (Rest API), Docker, Git, GitHub Actions, CI/CD, TensorFlow Lite, PyQt5, HuggingFace Spaces
- **Databases & Vector Stores:** PostgreSQL, FAISS, Pinecone, Qdrant, ChromaDB, Milvus
- **Other:** Workflow Automation, Claude Code, OpenAI Codex, Guardrails AI, Responsible AI, n8n
